220/35 SLIMLINE PIVOT ROOF

Gen 2 - The evolution continues

The 220/35 SLIMLINE PIVOT ROOF incorporates the latest design features of our Gen2 series, including the unique "cushion closing" feature with added blade overlap when closed.

Motorised by powerful twin Somfy Tubular motors, a multi-purpose Louvretec controller comes as standard. The system can also be configured for home automation technology.

Clean uncluttered lines

At only 35mm wide with a tapering topside, the blades stack superbly and cast minimal shadow when in use.

All the operating mechanism, electronics and motors are incorporated within the side frame extrusions, completely hidden from sight and protected from the weather.

Multi-purpose. Standard Opening Roof or Retract

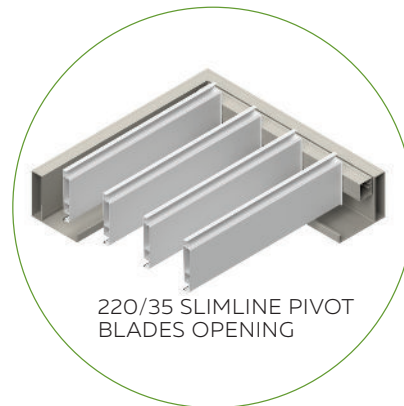

The blade used by this 220/35 SLIMLINE PIVOT Opening Roof is also available as a Retract Roof. The 220/35 SLIMLINE PIVOT is ideal to use stand alone or on multiple panel installations combining Retract and Standard Opening Roofs.
