WANAKA, NZ

220/35 SLIMLINE RETRACT BLADE

## 220/35 SLIMLINE RETRACT

### Gen 2 - The evolution continues

The 220/35 SLIMLINE RETRACT incorporates the latest design features of our Gen2 series, including the unique "cushion closing" feature with added blade overlap when closed.

Motorised by powerful twin Somfy Tubular motors, a multi-purpose Louvretec controller comes as standard. The system can also be configured for home automation technology.

### Clean uncluttered lines

At only 35mm wide with a tapering topside, the blades stack superbly and cast minimal shadow when in use.

All the operating mechanism, electronics and motors are incorporated within the side frame extrusions, completely hidden from site and protected from the weather.

Louvretec Retracts are factory assembled, tested and calibrated as part of the manufacturing process. They come to site pre-wired ready for the electrician to connect through a standard junction box.

### Multi-purpose Retract or Standard Opening Roof

The 220/35 SLIMLINE RETRACT blade is also available as a standard Spiral Pivot Opening Roof system.

The 220/35 SLIMLINE PIVOT this is ideal to use stand alone or on multiple panel installations combining Retract and standard Opening Roofs.
