

## INTRODUCING LOUVRETEC'S NEW GENERATION RETRACT ROOF SYSTEM

Gen 2 - The evolution continues

Choice of two new louvre blades

Louvretec is pleased to present our new Gen2 range of Retract Roof systems:

1. 220/35 SLIMLINE RETRACT
2. 220/45 SUPER RETRACT

We have been doing Retract Roofs since 2012, with much being learnt over that time.

Revised Retract/Pivot mechanism

We have always had a great retract/pivot mechanism, patented and manufactured exclusively for Louvretec by Advanced Design Innovations (ADI) in Woodonga, Australia. This mechanism has undergone further development in order to upgrade to twin Somfy Tubular motors.

Now powered by Somfy

The same tried and true motorisation that operates our award winning Spiral Pivot system now operates our Retracts – two Somfy motors per Retract.

Customised Louvretec Controller

A wireless handheld remote, custom made for Louvretec by Teleco Italy is standard. These multi-function remotes can also control lighting, heating and other Somfy powered items such as motorised outdoor blinds.

220/35 SLIMLINE  
RETRACT

220/45 SUPER  
RETRACT

These stylish new blades incorporate a unique "cushion-closing" system plus additional overlap cover when closed. Designed to look good in any position, be it closed, pivoting 0-135 degrees, or retract stacked at 90 degrees.
