

SUN LOUVRES OVERVIEW

airfoil & rectangular sun louvre systems

Louvretec offers a comprehensive range of Airfoil and Rectangular sun louvres. There is a wide variety of louvre shapes, with choices including motorisation, hand operable, end fixed or bracket fixed.

Louvretec's systems allow for a high degree of customisation - each project can be tailor made to perfectly match designer and end user requirements.

finding the right system

Firstly consider what shape of blade you would like to use - Airfoil or Rectangular?

To assist choice - this section of the catalogue (Sun Louvre Systems) is broken down into Airfoil & Rectangular categories.

size of blade

What size of blade is best suited for your application? Consider design, form and desired achievable spans.

Span is largely determined by blade size - the bigger the blade, the longer the span.

To assist with blade selection refer to the Product Range Overview & Spans at a Glance charts as follows:

For Sun Louvres - Airfoil refer to Section 7 page 7.

For Sun Louvres - Rectangular refer to Section 8 pages 7 and 8.

residential or commercial

All Louvretec Sun Louvre Systems are suitable for residential or commercial use.

Traditionally smaller Airfoil and Rectangular louvres are used on residential/domestic applications as often as motorised or hand-operable units.

Louvretec's larger spanning Maxi Louvres and the new Ultra 50 Rectangular louvres are engineered to meet the most demanding commercial requirements.

As with all architecture, options are important, as is choice.

Louvretec Sun Louvre Systems offer a range of options and elegant designs all fully engineered and certified for residential and commercial usage.

vent louvres

Louvretec has a range of screening and ventilation grills and louvres available. Please refer to Section 10 Custom Made pages 23-26 for more information regarding vent louvres.
